

solution pt. 3

New national ID card that replaces the passport, kela-card and other official forms of identity

Requires biometric identification from the user for authentication. Impossible to fake and misuse

Renders usernames and passwords irrelevant

Doesn't require a bank account to identify and log in.

solution pt. 4

Lowers the barrier for authenticating making digital services more accessible for more people

eIDAS compliant, it will work across Europe

Complies with EU accessibility laws and guidelines

Both the card and messaging platform are a basic human right. Public spaces will have terminals for anyone to use and can also be used with cellphones or computers at home
